@NBARBETTINI @OKTADEV

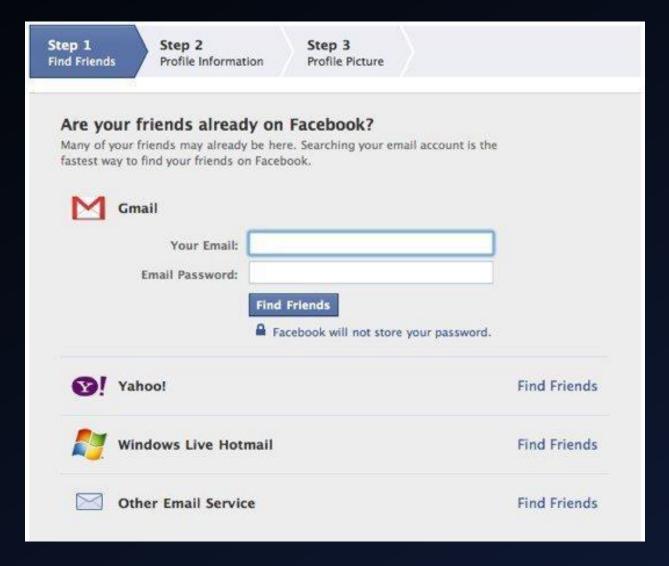

# Identity use cases (circa 2007)

- Simple login forms and cookies
- Single sign-on across sites SAML
- Mobile app login ???
- Delegated authorization ???

# Don't do it this way!

# Don't do it this way!

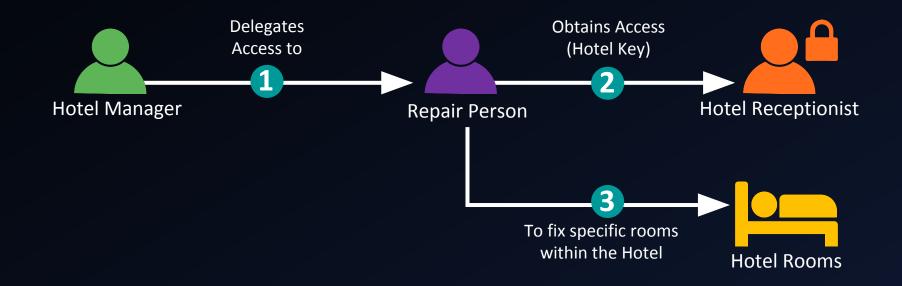

# The delegated authorization problem

HOW CAN I LET A WEBSITE ACCESS MY DATA (WITHOUT GIVING IT MY PASSWORD)?

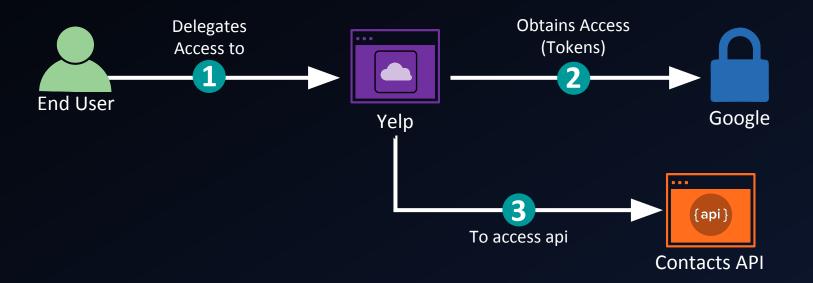

# A lot of confusion around OAuth & OIDC

- Terminology and jargon
- Incorrect advice
- To understand OpenID Connect, you need to learn first about OAuth
- Hard to find a life-like example

# OAuth – A real world example: Hotel Analogy

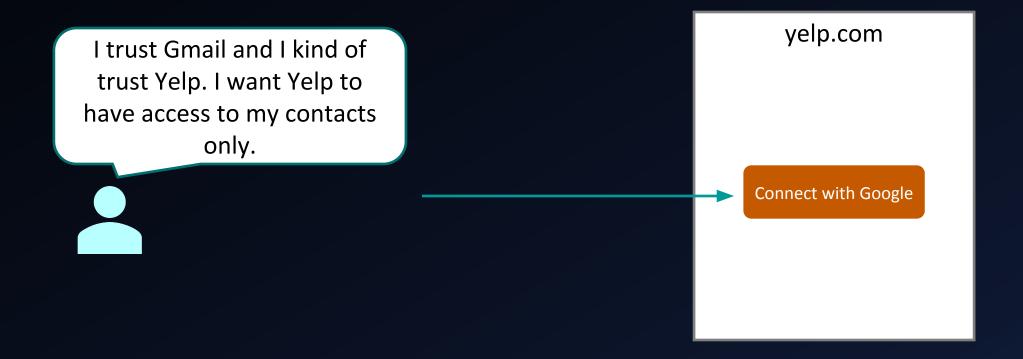

# OAuth: App Scenario

# OAuth 2.0 Terminology

Hotel	Арр	OAuth	Description
Hotel Manager	End User	Resource Owner	Wants a Client App to do something on their behalf
Repair Person	Yelp	Client Application	Needs authorization to interact with an API on behalf of a user
Hotel Receptionist	Google	Authorization Server	Grants access (in the form of tokens) to an app
Hotel Rooms	Contacts API	Resource Server	Has an API that an app can use if presented with a token

#### Delegated authorization with OAuth 2.0

#### OAuth 2.0 authorization code flow

Client App

yelp.com

Connect with Google

Go to authorization server

Redirect URI: yelp.com/callback

Response type: code

Authorization server

accounts.google.com

**Email** 

Password

Resource owner

contacts.google.com

Talk to resource server with access token

yelp.com/callback

Loading...

Back to redirect URI with authorization code

accounts.google.com

Allow Yelp to access your public profile and contacts?

No

Yes

# More OAuth 2.0 terminology

- Scope
- Consent

#### OAuth 2.0 authorization code flow

contacts.google.com

Client App

yelp.com

Connect with Google

Go to authorization server

Redirect URI: yelp.com/callback

Response type: code

Scope: profile contacts

Resource owner

Talk to resource server with access token

yelp.com/callback

Loading...

Back to redirect URI with authorization code

Authorization server

accounts.google.com

**Email** 

Password

Request consent from resource owner

accounts.google.com

Allow Yelp to access your public profile and contacts?

No

Yes

## Even more OAuth 2.0 terminology

- Back channel (highly secure channel)
- Front channel (less secure channel)

#### OAuth 2.0 authorization code flow

contacts.google.com

Client App

yelp.com

Connect with Google

Go to authorization server (front channel)

Redirect URI: yelp.com/callback

Response type: code

ogle.com

Exchange authorization code

Exchange authorization lback channel

Resource owner

Talk to resource server with access token (back channel)

yelp.com/callback

Loading...

Back to redirect URI

with authorization code (front channel)

Authorization server

accounts.google.com

**Email** 

Password

Request consent from resource owner

accounts.google.com

Allow Yelp to access your public profile and contacts?

No

Yes

#### Starting the flow

```
https://accounts.google.com/o/oauth2/v2/auth?
  client_id=abc123&
   redirect_uri=https://yelp.com/callback&
   scope=profile&
   response_type=code&
   state=foobar
```

#### Calling back

```
https://yelp.com/callback?
error=access_denied&
error_description=The user did not consent.
```

```
https://yelp.com/callback?
code=oMsCeLvIaQm6bTrgtp7&
state=foobar
```

#### Exchange code for an access token

```
POST www.googleapis.com/oauth2/v4/token
Content-Type: application/x-www-form-urlencoded
```

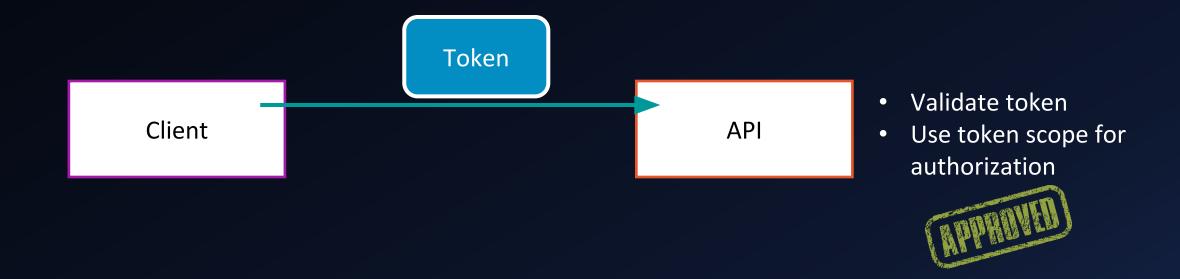

```
code=oMsCeLvIaQm6bTrgtp7&
client_id=abc123&
client_secret=secret123&
grant type=authorization code
```

#### Authorization server returns an access token

```
"access_token": "fFAGRNJru1FTz70BzhT3Zg",
"expires_in": 3920,
"token_type": "Bearer",
}
```

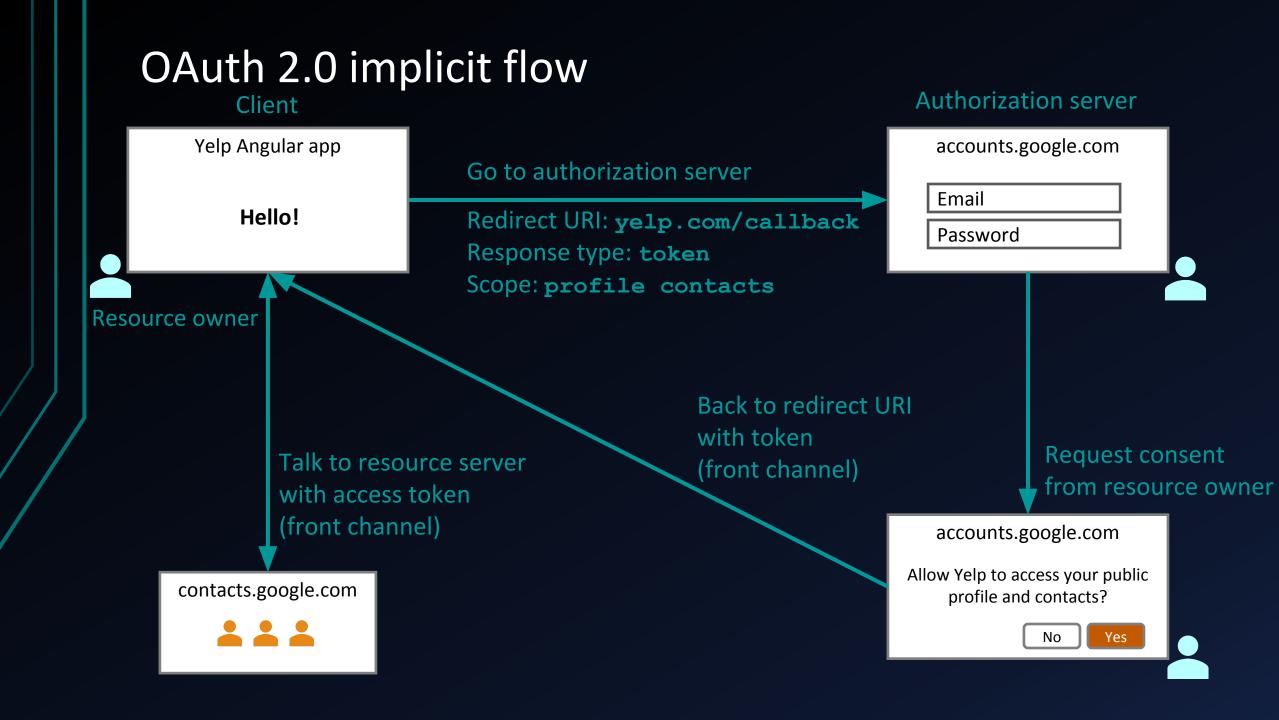

#### Use the access token

GET api.google.com/some/endpoint Authorization: Bearer fFAGRNJru1FTz70BzhT3Zg

#### OAuth 2.0 flows

- Authorization code (front channel + back channel)
- Authorization code w/ PKCE (front channel + back channel)\*
- Implicit (front channel only)
- Resource owner password (back channel only)
- Client credentials (back channel only)

### Identity use cases (circa 2012)

Simple login – OAuth 2.0

Single sign-on across sites – OAuth 2.0

Mobile app login – OAuth 2.0

Delegated authorization – OAuth 2.0

Authentication

Authentication

Authentication

**Authorization** 

#### Problems with OAuth 2.0 for authentication

- No standard way to get the user's information
- Every implementation is a little different
- No common set of scopes

## OAuth 2.0 and OpenID Connect

**OpenID Connect** 

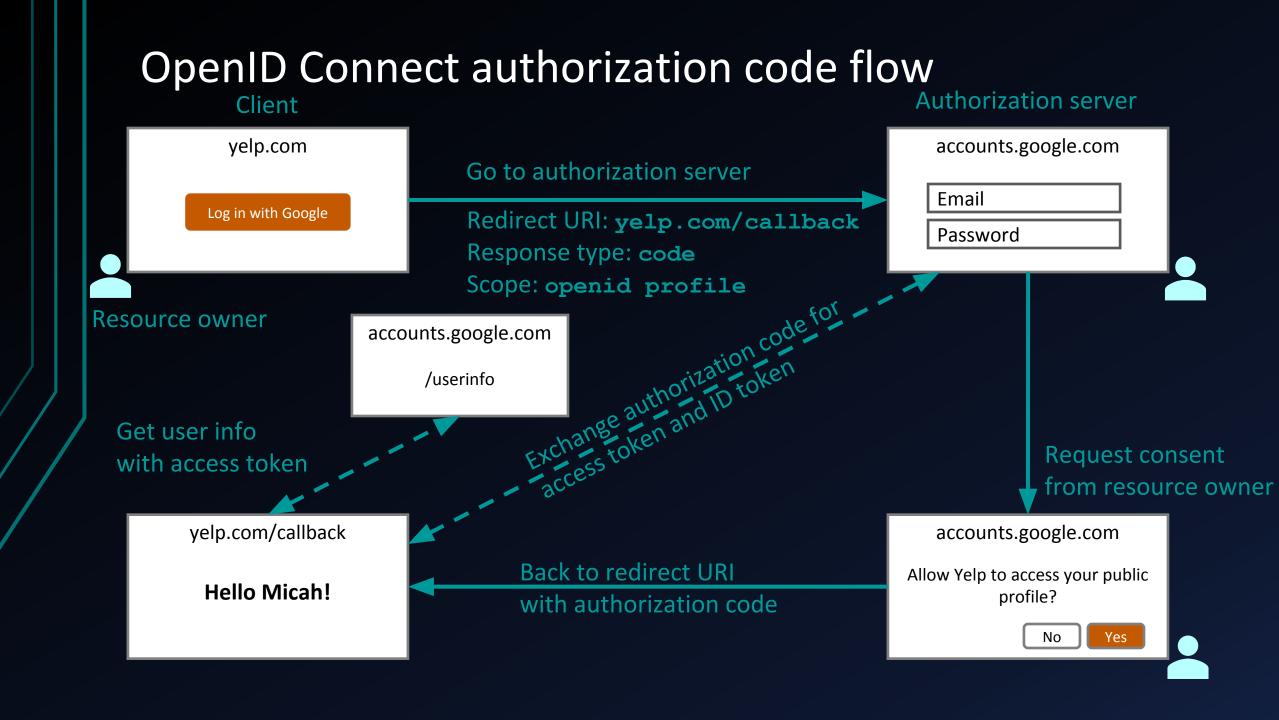

OAuth 2.0

**HTTP** 

- OpenID Connect is for authentication
- OAuth 2.0 is for authorization

### What OpenID Connect adds

- ID token
- /userinfo endpoint for getting more user information
- Standard set of scopes
- Standardized implementation

#### Getting the discovery document

```
GET https://accounts.google.com/.well-known/openid-configuration
 "issuer": "https://accounts.google.com",
 "authorization endpoint": "https://accounts.google.com/o/oauth2/v2/auth",
 "token endpoint": "https://www.googleapis.com/oauth2/v4/token",
 "userinfo endpoint": "https://www.googleapis.com/oauth2/v3/userinfo",
 "response types supported": [
   "code",
   "token",
   "id token",
   "code token",
```

#### Starting the flow

```
https://accounts.google.com/o/oauth2/v2/auth?
  client_id=abc123&
   redirect_uri=https://yelp.com/callback&
   scope=openid profile&
   response_type=code&
   state=foobar
```

#### Calling back

```
https://yelp.com/callback?
error=access_denied&
error_description=The user did not consent.
```

```
https://yelp.com/callback?
code=oMsCeLvIaQm6bTrgtp7&
state=foobar
```

#### Exchange code for access token and ID token

grant type=authorization code

```
POST www.googleapis.com/oauth2/v4/token
Content-Type: application/x-www-form-urlencoded

code=oMsCeLvIaQm6bTrgtp7&
client_id=abc123&
client_secret=secret123&
```

#### Authorization server returns access and ID tokens

```
"access_token": "fFAGRNJru1FTz70BzhT3Zg",
"id_token": "eyJraB03ds3F..."
"expires_in": 3920,
"token_type": "Bearer",
}
```

## ID token (JWT)

eyJhbGciOiJSUzI1NiIsImtpZCI6IkRNa3Itd0JqRU1EYnhOY25xaVJISVhuYUxubWI3UUpfWF9rWmJyaEtBMGMifQ

eyJzdWIiOiIwMHU5bzFuaWtqdk9CZzVabzBoNyIsInZlciI6MSwiaXNzIjoiaHR0cHM6Ly9kZXYtMzQxNjA3Lm9rdGFwcmV2aWV3LmNvbS9vYXV0aDIvYXVzOW84d3ZraG9ja3c5VEwwaDciLCJhdWQiOiJsWFNlbkx4eFBpOGtRVmpKRTVzNCIsImlhdCI6MTUwOTA0OTg5OCwiZXhwIjoxNTA5MDUzNDk4LCJqdGkiOiJJRC5oa2RXSXNBSXZTbnBGYVFHTVRYUGNVSmhhMkgwS2c5Ykl3ZEVvVm1ZZHN3IiwiYW1yIjpbImtiYSIsIm1mYSIsInB3ZCJdLCJpZHAiOiIwMG85bzFuaWpraWpLeGNpbjBoNyIsIm5vbmNlIjoidWpwMmFzeHlqN2UiLCJhdXRoX3RpbWUiOjE1MDkwNDk3MT19

dv4Ek8B4BDee1PcQT\_4zm7kxDEY1sRIGbLoNtlodZcSzHz-XU5GkKy16sAVmdX0IPUlAIrJAhNfQWQ-\_XZLBVPjETiZE8CgNg5uqNmeXMUnYnQmvN5oWlXUZ8Gcub-GAbJ8-NQuyBmyec1j3gmGzX3wemke8NkuI6SX2L4Wj1PyvkknBtbjfiF9ud1-ERKbobaFbnjDF0FTzvL6g34SpMmZWy6uc\_Hs--n4IC-ex-\_Ps3FcMwRggCW\_-7o2FpH6rJT0GPZYr0x44n3ZwAu2dGm6axtPI-sqU8b6sw7DaHpogDhxsXgMI0z0BMbYsQEiczoGn71ZFz107FiW4dH6g

Header

Payload (claims)

Signature

## The ID token (JWT)

```
(Header)
  "iss": "https://accounts.google.com",
  "sub": "micah.silverman@okta.com",
   "name": "Micah Silverman"
  "aud": "s6BhdRkqt3",
  "exp": 1311281970,
  "iat": 1311280970,
  "auth time": 1311280969,
(Signature)
```

## Calling the userinfo endpoint

```
GET www.googleapis.com/oauth2/v4/userinfo
Authorization: Bearer fFAGRNJru1FTz70BzhT3Zg
200 OK
Content-Type: application/json
   "sub": "you@gmail.com",
   "name": "Nate Barbettini"
   "profile picture": "http://plus.g.co/123"
```

### Identity use cases (today)

Simple login – OpenID Connect

Single sign-on across sites – OpenID Connect

Mobile app login – OpenID Connect

Delegated authorization – OAuth 2.0

Authentication

Authentication

Authentication

**Authorization** 

## OAuth and OpenID Connect

#### Use OAuth 2.0 for:

- Granting access to your API
- Getting access to user data in other systems

(Authorization)

#### Use OpenID Connect for:

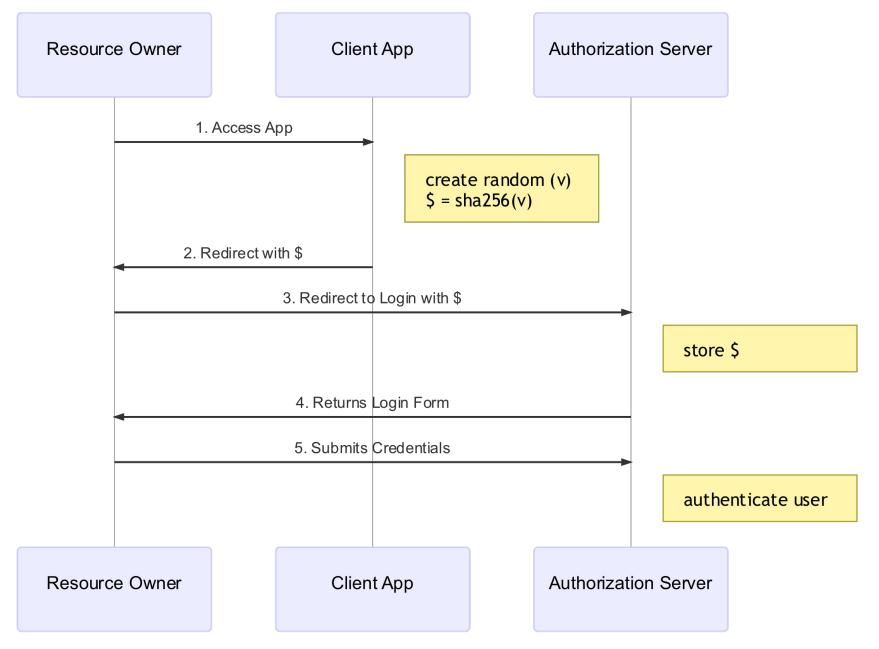

- Logging the user in
- Making your accounts available in other systems

(Authentication)

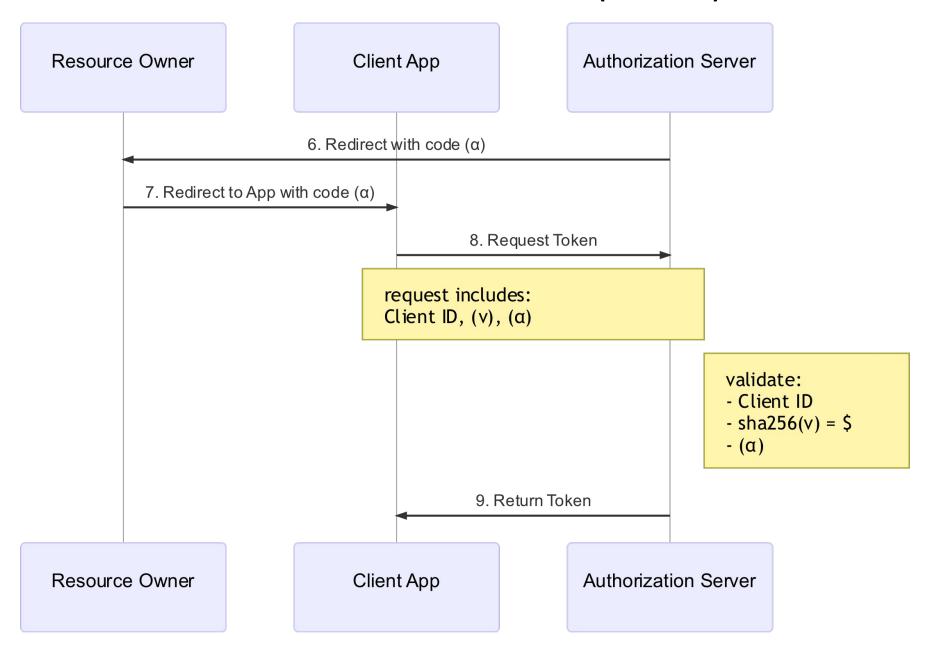

#### Which flow (grant type) do I use?

- Web application w/ server backend: authorization code flow
- Native or mobile app: authorization code with PKCE flow
- JavaScript app (SPA) w/ API backend:
  - authorization code with PKCE flow (if you can)
  - implicit flow (if you must)
- Microservices and APIs: client credentials flow

## Authorization Code with PKCE Flow (Part 1)

#### Authorization Code with PKCE Flow (Part 2)

#### Token validation

- The fast way: local validation
  - Validate cryptographic signature
  - Check expiration timestamp
- The strong way: introspection

# Thanks y'all!
